

Company Profile

L.T. Coatings Inc. offers high performance coatings and coating application equipment for the window and door industry and building restoration.

Our custom-colour coatings contain the best available resins, pigments, and additives in fluorocarbon, polyurethane, acrylic, and polysiloxane chemistries. Designed for wood, vinyl, fibreglass, aluminium, steel, and plastic composite substrates, each product is formulated for exceptional colour and gloss retention, durability, and chemical resistance. The short dry time increases production rates.

For most substrates, a one-coat spray application is sufficient to provide good coverage, abrasion and heat resistance (low heat gain), and long-term durability. Brush and roller applications generally require two coats. L.T. primers are available for wood and original metal surfaces, when required.

Waterborne and formulated with low VOCs (volatile organic content), L.T. products offer an easy and environmentally conscious application process and waste disposal.

Paint application equipment can be designed to meet your needs and budget.
